

Battery Recycling

at Dawson County Transfer Station

946 Burt Creek Road Dawsonville, GA 30534

Starting June 4, 2012

Alkaline batteries no longer contain mercury in the U.S. due to the 1996 law that phased out that component. However, recycling batteries helps keep heavy metals out of landfills and the air. Recycling batteries also saves resources because recovered plastic and metals can be used to make new batteries.

So, please don't throw them away; recycle today!

We accept the following alkaline household batteries:
AAA, AA, C, D, 9-volt

Sorry, lithium batteries are not accepted at this site.

To safely recycle your alkaline household batteries, plastic bags will be provided on-site for you to deposit your batteries in before depositing them into the provided bin.
